1. Independent auditor's report

Independent auditor's ISAE 3000 assurance report on controls for data protection and processing of personal data on behalf of customers subject to the General Data Protection Regulation (GDPR)

Scope

We have been engaged to provide assurance about team.blue Denmark A/S' (hereinafter "team.blue Denmark") description in section 3 of the described services in accordance with the data processing agreements with clients throughout the period from 01.01.2023 to 31.12.2023 (hereinafter "the description"), and about the design and operation of controls related to the control objectives stated in the description.

This report does not include controls performed by sub-suppliers, team.blue Denmark uses the following sub-suppliers:

- Fuzion A/S:
 - Housing
 - o Physical and environmental security of production environment
- GlobalConnect A/S:
 - o Housing
 - o Physical and environmental security of production environment
- Cibicom A/S:
 - Housing
 - o Physical and environmental security of production environment
 - o Storage of backup.
- B4Restore A/S:
 - Housing
 - o Backup

Additionally, team.blue Denmark uses an EDR/XDR sub-service provider for cloud storage and reporting logic for a subset of logging and monitoring on critical platforms.

The description provided by team.blue Denmark in section 3 of this report does not include control objectives and supporting controls at the sub-data processors of team.blue Denmark.

Some of the control objectives presented in the description provided by team.blue Denmark can only be achieved if complementary controls at the clients are implemented and are working effectively. This report does not include the design, implementation and operating effectiveness of such complementary controls.

team.blue Denmark's responsibilities

team.blue Denmark is responsible for preparing the description and the accompanying assertion in section 2, including the completeness, accuracy and method of presentation of the description and the assertion; providing the services covered by the description; stating the control objectives; and designing and implementing controls to achieve the stated control objectives.

Auditor's independence and quality control

We have complied with the requirements for independence of the IESBA's Code of Ethics for Professional Accountants, which is based on the fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional conduct.

Deloitte Statsautoriseret Revisionspartnerselskab applies International Standard on Quality Management 1, ISQM 1, which requires the firm to design, implement and operate a system of quality management, including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Auditor's responsibilities

Our responsibility is to express an opinion on team.blue Denmark's description and on the design and operation of controls related to the control objectives stated in that description, based on our procedures. We conducted our engagement in accordance with International Standard on Assurance Engagements 3000, "Assurance Engagements Other than Audits or Reviews of Historical Financial Information", and additional requirements under Danish audit regulation, in order to obtain reasonable assurance about whether, in all material respects, the description is fairly presented, and the controls are suitably designed and operating effectively.

An assurance engagement to report on the description, design and operating effectiveness of controls at a data processor involves performing procedures to obtain evidence about the disclosures in the data processor's description of its services, and the design and operating effectiveness of controls. The procedures selected depend on the auditor's judgement, including the assessment of the risks that the description is not fairly presented, and that controls are not suitably designed or operating effectively. Our procedures included testing the operating effectiveness of controls that we consider necessary to provide reasonable assurance that the control objectives stated in the description were achieved.

An assurance engagement of this type also includes evaluating the overall presentation of the description, the appropriateness of the objectives stated therein and the appropriateness of the criteria specified by the data processor and described in section 2.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Limitations of controls at team.blue Denmark

team.blue Denmark's description is prepared to meet the common needs of a broad range of data controllers and may not, therefore, include every aspect of control that the individual data controllers may consider important in their particular circumstances. Also, because of their nature, controls at a data processor may not prevent or detect personal data breaches. Furthermore, the projection of any evaluation of the controls to future periods is subject to the risk that controls at a data processor may become inadequate or fail.

Opinion

Our opinion has been formed on the basis of the matters outlined in this auditor's report. The criteria we used in forming our opinion are those described in section 2 in this report. In our opinion, in all material respects:

- (a) The description fairly presents the services provided as designed and implemented throughout the period from 01.01.2023 to 31.12.2023;
- (b) The controls related to the control objectives stated in the description were suitably designed throughout the period from 01.01.2023 to 31.12.2023.
- (c) The controls tested, which were those necessary to provide reasonable assurance that the control objectives stated in the description were achieved, operated effectively throughout the period from 01.01.2023 to 31.12.2023.

Description of tests of controls

The specific controls tested and the nature, timing, and results of those tests are listed in section 4 of this report.

Intended users and purpose

This report and the description of tests of controls in section 4 are intended only for data controllers who have used team.blue Denmark's services who have a sufficient understanding to consider it along with other information, including information about controls operated by the data controllers themselves, in assessing whether the requirements of the EU Regulation on the protection of

natural persons with regard to the processing of personal data and on the free movement of such data (hereinafter "the Regulation") have been complied with.

2. Management assertion

The accompanying description has been prepared for the customers who have used the services described in this report, and who have a sufficient understanding to consider the description along with other information, including information about controls operated by the data controllers themselves, in assessing whether the requirements of the Regulation have been complied with.

team.blue Denmark confirms that:

- a) The accompanying description in section 3 fairly presents the system for processing personal data for data controllers covered by the General Data Protection Regulation throughout the period from 01.01.2023 to 31.12.2023. The criteria used in making this statement were that the accompanying description:
 - (i) Presents how the services delivered were designed and implemented, including:
 - The types of services provided, including the type of personal data processed;
 - The processes in both IT and manual systems that are used for initiating, registering, processing and, if necessary, correcting, deleting and restricting processing of personal data;
 - The processes used to ensure that data processing has taken place in accordance with contract, instructions or agreement with the data controller;
 - The processes ensuring that the persons authorised to process personal data have committed to confidentiality or are subject to an appropriate statutory duty of confidentiality;
 - The processes which, on termination of data processing, ensure that, according to the data controller's choice, all personal data can be deleted or returned, unless law or regulation prescribes retention of personal data;
 - The processes which, in the event of a personal data breach, support the data controller in reporting to the supervisory authority and notifying the data subjects of the breach;
 - The processes which ensure appropriate technical and organisational security measures for the processing of personal data, taking into account the risks involved in processing, in particular, by accidental or illegal destruction, loss, alteration, unauthorised disclosure or access to personal data transmitted, stored or otherwise processed;
 - Controls which we, referring to the system, assumed would be designed and implemented by the data controller and which, if necessary to achieve the control objectives set forth in the description, are identified in the description;
 - Other aspects of our control environment, risk assessment process, information system (including related business processes) and communication, control activities and monitoring controls that are relevant to the processing of personal data.
 - (ii) Contains relevant information about changes in the data processor's services in the processing of personal data made throughout the period from 01.01.2023 to 31.12.2023.
 - (iii) Does not omit or distort information relevant to the scope of the system described for the processing of personal data, taking into consideration that the description was prepared to meet the general needs of a wide range of data controllers and therefore cannot include any aspect of the system that the individual data controller might consider important according to their particular circumstances.
- b) The controls associated with the control objectives listed in the accompanying description were appropriately designed and operated effectively throughout the period from 01.01.2023 to 31.12.2023. The criteria used in making this statement were that:
 - (i) The risks that threatened the achievement of the control objectives listed in the description were identified;
 - (ii) The controls identified would, if carried out as described, provide a high level of assurance that the risks involved did not prevent the achievement of the control objectives stated; and
 - (iii) The controls were consistently applied as designed, including that manual controls were applied by individuals who have the appropriate competence and authority, throughout the period from 01.01.2023 to 31.12.2023.

c) Appropriate technical and organisational measures have been established and maintained to fulfil the agreements with the data controller, good data processing practices and relevant data processing requirements under the General Data Protection Regulation.

3. Description of processing

3.1 Introduction

As part of the services provided to the data controller and during the term of the concluded data processing agreement, the data processor will process personal data on behalf of the data controller for the purpose of storing the personal data.

As a hosting company, team.blue Denmark hosts many customers' technical platforms (services) as agreed in hosting agreements and concluded terms and conditions. The services are hosted on team.blue Denmark's servers, which are located at physical data centres. team.blue Denmark offers its customers technical platforms that enable customers to store their data. team.blue Denmark operates the servers on which the data is stored, which includes provision of technical assistance and carrying out maintenance work.

3.2 Nature of processing

The data processor's processing of personal data on behalf of the Data Controller primarily concerns storing of personal data. As a natural part of providing the services, team.blue Denmark will also carry out deletion of data in accordance with instructions from the data controller and the data processing agreement.

team.blue Denmark is in no way dependent on the customer to provide or store personal data on their services in order to provide the services.

When carrying out our data processing activities we comply with the following:

- Personal data is processed based on instructions from the data controller.
- The data controller is informed if an instruction, in our opinion, infringes the Regulation or other European Union or member state data protection provisions.
- Organisational measures are implemented to safeguard the security of processing, such as management reviews and approvals, screenings procedures, employee confidentiality requirements, awareness training and access controls.
- Personal data is stored and deleted in accordance with the data processing agreement with the data controller.
- The data controller is informed of the locations at which the data processing is taking place.
- No current transfer of personal data to third countries is taking place. Such transfers can only be carried out according to instructions from the data controller.
- Sub-processors are only being used based on a general approval from the data controller and upon prior notification of the use of a new sub-processor.
- Assistance is provided to the data controller to comply with data subject's rights.
- If any personal data breach occurs, we will inform the data controller of it without undue delay and provide relevant information about the incident.

3.3 Personal data

team.blue Denmark makes its services available to the controller, and the data controller is thus able to store personal data using the services. As team.blue Denmark has no control or knowledge of the types of personal data stored by the data controller, the responsibility to define and specify the personal data and data subjects will lie with the data controller.

To provide the data controller with a starting point, the data processing agreement will include the following listings in Appendix A:

REGULAR PERSONAL INFOR- MATION	PERSONAL DATA SPECIFICALLY REGULATED IN DATABESKYTTELSESLOVEN	SPECIAL CATEGORIES OF PER- SONAL INFORMATION
Any other kind of personal information that is not special categories of personal information.	Information about criminal offences CPR number	Racial or ethnic origin Political, religious or philosophical beliefs Trade union membership Data concerning health Information revealing sex life or sexual orientation Genetic and biometric data

To provide the data controller with a starting point, categories of data subjects falling within the data processing agreement are set out to be:

Classifications of data subjects whom the personal information pertains to may, for example, be users, employees, applicants, candidates, customers, consumers, patients or similar individuals.

3.4 Practical measures

The established information security management systems we follow are essential for the processing of personal data controls in the ISMS, as well as other security measures, will be covered by our ISAE 3402 auditor's report and ISO 27001 audits.

These measures are implemented and based on a risk assessment, recognised standards, including ISO27001, and general guidelines of the data protection regulation. All employees have been made aware of team.blue Denmark's policies and guidelines, including information security and data security policies, and they are continuously trained throughout their employment.

3.5 Security of processing

Organisation of security

We have established an industry-leading information security programme (ISMS) that gives our customers the best protection and highest degree of confidence. The programme follows the ISO 27001 security standard, which we have been certified for since 2015.

Policies, procedures and standards

We have defined a set of policies, procedures and standards for how we operate in the company and take the best care of your data. The documents are regularly updated in line with changes to our risk assessment. In this way we ensure that we always prioritise our efforts where they are needed the most.

Employee security

All employees and consultants with access to systems and facilities are subject to our security policies. Everyone undergoes security awareness training where they are presented with all relevant and current privacy and security topics. This occurs both upon commencement and continuously throughout their employment. The purpose is to equip employees so they can cope with actual threats against company and customer data

To boost the overall level of the industry and to maintain own competences, our employees participate actively in communities and exchange of experience groups. We encourage our employees to constantly stay abreast of the latest developments and to acquire the highest certifications within security, networks, etc.

Dedicated security and personal data competences

Our security manager is responsible for implementing and maintaining our information security programme. Our internal auditor regularly reviews our security setup and reports directly to management. Finally, we have internal, legal competences within personal data, ensuring that personal data is processed according to the applicable rules both within the company and on behalf of our customers.

Operational security

Our security environment is divided into several layers:

Physical security

Our data centres are state of the art, and our data centre provider is responsible for the physical environment, such as power, cooling, fire suppression and access control, and we carry out stringent checks that our sub-contractors always comply with the applicable security regulations for this field.

Network

Our network is segmented, so customers are protected from each other and from threats that move across the network. Firewalls restrict attacks on customers' environments, and DDoS protection limits the impact a potential attack might have on the servers. Advanced network inspection detects patterns and attack attempts from known malicious IP addresses and alerts our operations department, if necessary.

Logical access

We only assign rights to employees who need them, and we evaluate them regularly. Only specially privileged employees have authority to manage the internal systems.

Monitoring

We monitor our infrastructure and relevant services around the clock. All deviations are registered in our incident management system. In addition to monitoring, we have assigned a 24/7 on-call service.

Logging

We log all access to management and customer environments. In this way, we ensure integrity and traceability and can correlate incidents. Our central log platform ensures that we can correlate logs from many sources.

Backup

We perform backup based on the individual agreement with the customer or the agreed SLA. Backup data is always stored on another site than the production data, so a copy is always available in case of a critical failure.

Anti-virus

Next-generation anti-virus software has been deployed on internal workstations. The next-gen anti-virus is designed to detect threats by detecting and preventing malicious behaviour.

As a customer it is your responsibility to deploy anti-virus software in your own environment, which is key to protecting you from malicious behaviour.

Business continuity and disaster recovery

Business continuity is about being prepared for incidents that may have a critical or disastrous impact on operations. Therefore, we have contingency plans which determine our procedures, routines and roles in the event of a disaster. Employees are trained for such an emergency several times a year.

In case of a security incident, an incident management plan and contingency plan have been prepared. All stakeholders and teams involved have been informed of their role if an incident that requires activation of the contingency plan should occur. The contingency plan is approved by the Security Board on an annual basis, and annual tests of the contingency plan are carried out.

3.6 Risk assessment

The entire operation of team.blue Denmark is at all levels governed and driven by necessary risk assessments, which are carried out on a smaller scale on a daily basis and also materialise in important overall assessments and positions on our level of security. Our risk assessment procedure consists of:

- Identification and mapping of all of the risks involved in the processing and a classification of such risks
- Assessment of what constitutes appropriate technical and organisational measures to ensure compliance with the Regulation and the documentability thereof.

Risk management is implemented in team.blue Denmark as an integral part of team.blue Denmark's processes. A risk register is continuously maintained throughout the year, containing the most significant risks to team.blue Denmark's operation of services. Risk treatment plans are defined and tracked for risks that fall outside our risk acceptance criteria. The risk register is reviewed at least annually and approved by the Security Board.

Based on the risk assessment, information security and data security policies and measures are prepared and implemented.

3.7 Control measures

A description of the control measures initiated and implemented by the data processor to measure and test the effectiveness of the management system established for information security and for processing personal data as well as performance measurement thereof.

Also refer to section 4 for a description of the specific control activities.

- Data processing agreements and instructions
- Information Security Policies
- Organisational measures
- Data storage and deletion
- System and application access control
- Supplier service delivery management and use of sub-processors
- Incident management in case of a personal data breach.

The following have been prepared:

- Risk assessments of processing activities
- Information security and data security policies
- Awareness training of employees in protection of personal data and IT security
- Supplier management and use of sub-processors
- Information security aspects of business continuity management

• Annual cycle of periodic controls related to organisational and technical measures.

3.8 Complementary controls at the data controllers

The data controllers have the following obligations:

- To define, establish and inform the data processor of the types of personal data and categories of personal data being processed on behalf of the controller
- To ensure the legality of instructions under the regulations in force at any time under privacy law
- That instructions are appropriate with respect to this data processing agreement and the principal service
- To ensure deletion routines.

4 team blue Denmark's control objectives, controls, test and results

Introduction

This report is intended to provide the data controllers with information about the controls at team.blue Denmark that may affect the processing of personal data, and to provide the data controllers with information about the design and implementation of the controls that were tested.

This report, when combined with an understanding and assessment of the controls at the data controllers, is intended to assist the data controllers in assessing the risks related to the processing of personal data that may be affected by the controls at team.blue Denmark.

Our testing of team.blue Denmark's controls was limited to the control objectives and related controls listed in the matrices in this section of the report and did not include all controls described in the system description, nor controls that may be in place at the data controllers. It is the responsibility of the data controllers to evaluate this information in relation to the controls in place at each data controller. If certain complementary controls are not in place at the data controller, team.blue Denmark's controls may not compensate for such weaknesses.

team.blue Denmark's system description does not include control objectives and associated controls at the sub-service organisation. team.blue Denmark uses the following sub-suppliers to deliver physical and environmental security of production environments and storage of backup.

- Fuzion A/S:
 - Housing
 - o Physical and environmental security of production environment
- GlobalConnect A/S:
 - Housing
 - o Physical and environmental security of production environment
- Cibicom A/S:
 - Housing
 - o Physical and environmental security of production environment
 - o Storage of backup.
- B4Restore A/S:
 - o Housing
 - o Backup

Additionally, team.blue Denmark uses an EDR/XDR sub-service provider for cloud storage and reporting logic for a subset of logging and monitoring on critical platforms.

The data controller should assess whether obtaining audit report's from sub-data processors is relevant to be able to make an overall assessment of whether all necessary controls are in place in relation to the overall control environment.

Test of controls

The test of controls performed involves one or more of the following methods:

Method	Description
Interview	Interviews with selected personnel at team.blue Denmark.
Observation	Observation of the execution of controls.
Inspection	Review and evaluation of policies, procedures and documentation of the performance of the
	control. This includes reading and evaluating reports and other documentation to assess
	whether specific controls are designed and implemented. Furthermore, it is assessed whether
controls are monitored and supervised adequately and at appropriate inter	
Re-performance	Repetition of the relevant control to verify that the control functions as intended.

Control objectives, controls and test results

The following matrices state the control objectives and controls tested and present the audit procedures performed and the results thereof. If we identified material control weaknesses, we have described them as well.

Control objective A

Procedures and controls are complied with to ensure that instructions for the processing of personal data are complied with in accordance with the data processing agreement entered into.

No.	team.blue Denmark's control activity	Test performed by Deloitte	Results of Deloitte's test
A.1	team.blue Denmarks standard processing agreement is applicable to customers storing personal data on team.blue Denmark's servers by using services provided by team.blue Denmark.	Deloitte has checked by way of inspection that formalised procedures exist to ensure that personal data is only processed according to instructions.	No exceptions noted.
	Written procedures and the standard data processing agreement require that personal data must only be processed when instructions to this effect are available.	Deloitte has checked by way of inspection that the procedures include a requirement to assess at least once a year the need for updates, including in case of changes in the data controller's instructions or changes in the data pro-
